ALLUSLATE[®]

aluminium cladding

WHAT IS ALLUSLATE®?

Alluslate® is a **composite panel** made up of two **resistant and malleable** external layers of aluminum alloy 3105.

The upper sheet is decorated using **advanced printing techniques** and then protected by a coating that will determine the final finish: **Matt (Matt) or Gloss (Glazed)**.

The core of the panel is made of a low-density thermoplastic polymer (LDPE) **with a flame-retardant mineral filler**. All this creates a material with innovative properties.

Alluslate® is supplied in large format **rectified panels** (1200x2600mm). These are **flexible** and can be **handled, transported and machined with great ease**. They present two different types of finishes: the **gloss finish (Glazed)**, which can be easily **machined with simple tools**, and the **textured (Matt)**, which can be **machined, folded and curved**.
